Final Project

Joshua Firestone

Abstract

For this project I will double up on a project for my Supply Chain Analytics course. We haven't settled on a topic yet, but it is supposed to be a group project where we find a dataset and perform some of the analyses on it we've gone over in class: regression, classification, predictive models, etc. I plan to take the work we do in that class and convert it for the use of the r-markdown paper in PS811.
