Abstract

For this project I am doubling up on a project for my Supply Chain Analytics course. It uses Boston housing data which is a fairly common dataset that is often used as a sample case. For the class project our task was to utilize multiple models and methods that we have learned this semester to analyze the data. My portion was regression trees and random forests, so that will be all I include here.

Contents

Typing some sample text here. Now I want to insert a Tableau image. Let's see if it works!
